About Me

- An Electrical & Electronics Engineering student with a strong interest in back-end development, system administration and robotics.
- Skilled in programming languages such as JavaScript, TypeScript, Python, Rust, and Go. Experienced in building web applications using frameworks like NestJS, ExpressJS, and ReactJS. Proficient in database management with PostgreSQL and MongoDB.
- Mostly interested in system administration, networking, and DevOps practices. Familiar with cloud platforms like AWS, OCI, MS Azure and GCP, as well as technologies such as Proxmox, ESXi, Docker and Kubernetes.

Work Experience

- 2020 – ... ■ **Freelance System Administrator.** Global, Remote.
- 2013 – ... ■ **Freelance Back-End Developer.** Global, Remote.
- 2020 – 2025 ■ **Full-Stack Developer.** BHAPI, Kayseri, Turkey.
- 2023 – 2024 ■ **Welding Robot Operator.** Denka Metal, Kayseri, Turkey.
- 2023 – 2023 ■ **CNC Lasercut Operator.** Denka Metal, Kayseri, Turkey.
- 2020 – 2022 ■ **Full-Stack Developer.** HastePaste, Kayseri, Turkey.
- 2021 – 2021 ■ **Full-Stack Developer.** Vadicell, Turkey.
- **System Administrator.** Sunucu Vadisi, Turkey.
- 2020 – 2020 ■ **Front-End Developer.** Doory, Ankara, Turkey, Remote.

Education

- 2022 – ... ■ **Bachelor of Science in Electrical and Electronics Engineering.**
Abdullah Gül University, Kayseri, Turkey.
Expected graduation: 2027.
GPA: 3.19/4.00.
Relevant courses: Circuit Theory, Digital Systems, Signals and Systems, Programming in C, Electronics

Skills

- Language ■ Reading, writing and speaking competencies for English and Turkish.
- Coding ■ JavaScript, TypeScript, Go, Python, Rust, SQL, GML, $\LaTeX$,
- Database ■ PostgreSQL, SQLite, MongoDB, Redis.
- Web Development ■ React, NextJS, Express, NestJS, REST, GraphQL, HTML, CSS, SASS, LESS, Tailwind CSS, Bootstrap, jQuery.
- Systems ■ Linux, Git, Docker, Kubernetes, CI/CD, Nginx, Type-1/Type-2 Hypervisors, Virtualization, LXC/LXD, Networking, Ansible, Terraform.
- Misc. ■ Circuit design, SPICE simulation, 3D design, SolidWorks, Office apps, critical thinking, effective research, teaching, training, consultation, and mentoring.

Teachings

Text-based Tutorials

- 2025 – ...  **What the Heck Is a Phasor?** on my website.
<https://338.rocks/tags/phasors>

Video Tutorials

- 2023 – ...  **Build Your Own Home Server** on YouTube. 12 videos, continuing, 5 hours and 40 minutes.
https://www.youtube.com/playlist?list=PLkinkJ9vcYJ_reRMS57JBkvz_i35-kYoi
- 2020  **ExpressJS Tutorials** on YouTube. 15 videos, 2 hours and 20 minutes.
https://www.youtube.com/playlist?list=PLkinkJ9vcYJ_uuiJUoqepgNVd7-2a4Bbg

Miscellaneous Experience

Certification

- 2021  **Go Programming Language Certificate.** Awarded by Hackerrank.
<https://www.hackerrank.com/certificates/24f89f0f4d0d>
-  **NodeJS Certificate.** Awarded by Hackerrank.
<https://www.hackerrank.com/certificates/cdae760133a7>
-  **Problem Solving Certificate.** Awarded by Hackerrank.
<https://www.hackerrank.com/certificates/90e8f3811077>
-  **Python Programming Language Certificate.** Awarded by Hackerrank.
<https://www.hackerrank.com/certificates/5e5bb3381a30>
-  **ReactJS Certificate.** Awarded by Hackerrank.
<https://www.hackerrank.com/certificates/e641c5282518>

Hobbies

- Gaming  Strategy games, RPGs, Souls-like, Metroidvania, platformers, and indie games.
- Music  Listening to rock and metal, playing wind instruments.
- Sports  Body-building, calisthenics, and cycling.

Projects

Academic Projects

- 2025  **Digital Safelock Design**
- Designed and implemented a modular FSM-based digital safe lock with password entry, countdown timer, and 7-segment display.
 - Wrote reusable VHDL components including FSM controller, timer, button debouncer, led controller and 7-segment display driver.
 - Implemented the design on a Basys3 FPGA board using Vivado.
- https://github.com/dotrocks/dsd_project_2_security_system

Projects (continued)

2024

📌 Electric Stethoscope

- Designed and implemented an electric stethoscope with analog and digital signal processing. A custom casing was designed using SolidWorks and manufactured using a 3D printer.
- Used an electret microphone to capture the sound of a heartbeat and amplified/filtered it using an op-amp circuit. A custom Python and Rust based desktop application was developed to filter and visualize the signal.
- Implemented the design in real life and acquired the sound of a heartbeat. Filtered signal was seen on a custom-made desktop application.

<https://github.com/dotrocks/sapa-project-electric-stethoscope>

Personal Projects

2023

📌 NCFS

- A custom Docker image for making game server behind CGNAT accessible from the internet.
- Uses NGROK and Cloudflare to create a secure tunnel to the game server.
- Automatically configures the game server to use the tunnel and updates the DNS records on Cloudflare.

<https://github.com/barbarbar338/ncfs>

<https://hub.docker.com/r/barbarbar338/ncfs>

📌 Social Media Random Quotes

- A simple bot that sends random quotes to social media platforms and celebrates saved birthdays every day.
- Currently supports Instagram, Discord and Threads.

<https://github.com/barbarbar338/social-media-random-quotes>

2022

📌 Unified Chat

- An all-in-one chat application for streamers that combines multiple chat platforms into one.
- Supports Twitch, Discord, YouTube, and Twitter chat.
- Allows users to send messages to all platforms at once, and view all chats in one place.
- Built with Flutter, NodeJS, NestJS, Vue and TailwindCSS

<https://github.com/unifiedchat>

📌 Electron Tetris

- A simple cross-platform Tetris game.
- Built with Electron, React and TailwindCSS

<https://github.com/barbarbar338/electron-tetris>

Projects (continued)

2021

📌 **kek**

- GitHub Action to randomly laugh at people who open an issue on your repository. (R.I.P El Risitas)

<https://github.com/barbarbar338/kek>

📌 **Iftar Bot**

- A Discord bot that plays adhan and reminds users to break their fast during Ramadan.
- Built using Go language and DiscordGo library.

<https://github.com/barbarbar338/iftar-bot>

2020

📌 **HastePaste**

- An open-source alternative to pastebin that allows users to share code snippets and text files that served millions of users and thousands of new pastes every day.
- Supports syntax highlighting for over 100 programming languages and whole system is translated into Turkish, English and Russian.
- Built with NestJS, TypeScript, NextJS, TailwindCSS and PostgreSQL.

<https://github.com/barbarbar338/hastepaste>

📌 **Brawlhalla Open API**

- An unofficial API for Brawlhalla that provides access to game data and player statistics.
- Prepared for easier and unlimited access to Brawlhalla data.
- Built with NestJS, TypeScript, and MongoDB.

<https://github.com/barbarbar338/bh-open-api>

📌 **Slash Level**

- First Slash command based leveling system for Discord that served hundreds of servers.
- Allows users to gain experience points and level up by sending messages in Discord channels.
- Built with Discord.js and MongoDB.

<https://github.com/barbarbar338/slash-level>

📌 **Blur Auth**

- An all-in-one authentication solution for applications, providing a secure and user-friendly experience.
- An alternative to Gravatar, Blur Auth allows users to create a unique avatar that is not tied to their email address but their Blur account.
- Created custom time-based auth key generator, snowflake generator, load balancer and reverse proxy.
- Built with React, NodeJS, C++, MongoDB, and NestJS.

<https://github.com/auth-blur>

Projects (continued)

📌 Sidra

- A NestJS-like framework for building Cloudflare Workers applications.
- Sidra is a lightweight framework that provides NestJS like decorators to build serverless applications on Cloudflare Workers.
- Built with TypeScript.

<https://github.com/barbarbar338/sidra>

<https://barbarbar338.github.io/sidra>
